

# Josephine Scholl Collection Catalog

Updated May 2017

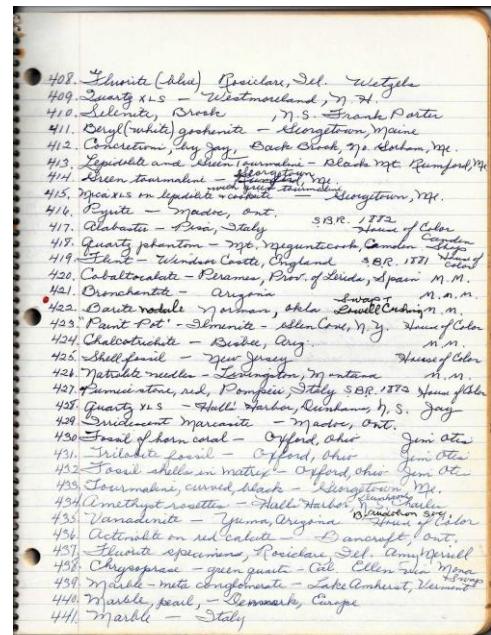

MMGS acquired the large mineral collection of Josephine Manchester “Jo” Scholl (1906-1991) of North Windham, Maine, in April 2016. Jo’s granddaughter approached someone she knew to be interested in rocks and minerals, faculty member at neighboring St. Joseph’s College (and MMGS member) Steve Bridge, for advice on disposition of the collection which for some 25 years had sat untouched in the basement of the Scholl home, now occupied by Jo’s son and daughter-in-law. Much of the collection is well labeled, and Jo left a catalog listing more than 1,600 of the best items, greatly enhancing the interest and value of the collection. Many school and even college classes made the trip to the Scholls’ basement to view the collection during Jo’s lifetime.

Steve viewed the collection in April and was offered the opportunity to purchase it himself. He decided that because of its size (tens of thousands of pieces) and significance, it would be more appropriate for MMGS to acquire the collection and manage its disposition. MMGS decided at its April 2016 meeting to purchase the collection for the modest asking price. During the summer and fall of 2016 a team of MMGS members packed up the collection, moved it to storage, and began processing and organizing it for sale. The initial inventory compiled during packing and moving includes more than 400 line items, most of them boxes containing dozens of specimens. (Seventeen line items are metal cabinets, each cabinet containing an average of 20 plastic drawers of small pieces—at perhaps nine or ten pieces per drawer, those cabinets alone contain more than 3,000 pieces!) The first auction of Scholl specimens was held November 19, 2016.

The collection was assembled between the 1950s and about 1980. Much of the material was field collected by the Scholls on excursions to collecting sites around Maine and elsewhere in New England, eastern Canada, and across the U.S. (Jo’s husband Charles is said to have explained that Jo was the collector and that he merely drove the van and lugged rocks.) Many of the localities represented have long been inaccessible to collectors, and several no longer exist at all. Jo Scholl’s collection is a time capsule of what a motivated collector in the Northeast could acquire during the heyday of the rockhounding hobby in the 1950s, 60s, and 70s.

The Scholls were members of the former Coastal Maine Mineral Club and for several years held large, multi-day swap meets annually on their property in North Windham that attracted collectors and dealers from as far away as the Midwest. Many specimens are noted in the catalog as having been acquired at those events. Jo’s sister Martha “Mattie” Menard (1903-1993) lived with her husband next door to the Scholls and was an equally ardent mineral collector who traveled widely and is listed in the catalog as the source (“M.M.” or “M.M.M.”) of many more specimens. Martha’s collection, said to have been comparable to Jo’s, was sold at auction shortly after her death.

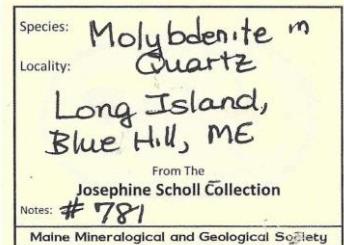

Where possible, MMGS sale labels for specimens from the Scholl collection include Jo’s catalog number at the bottom. Many specimens also retain their original masking-tape labels. Jo’s handwritten collection catalog consists of two spiral-bound notebooks. One notebook lists the specimens in numerical order and the other, apparently compiled from the first notebook, lists the rocks and minerals in alphabetical order. A typical catalog

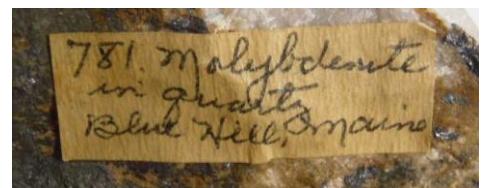

A sample page of Jo Sholl's manuscript catalog

entry indicates the catalog number, name, and locality for that item, and many entries include the source, date of acquisition, and/or price paid for the specimen as well. In many cases the same catalog number was applied to a group of specimens of the same species and locality, usually (but not always) acquired together from the same source. Thus in many cases the same catalog number appears on more than one label.

Bethany Clopton, with help from her husband Ed, compiled information from the two notebooks into the catalog that appears here. This document is presented for its historical value as an edited transcript of Jo's notebooks and is not a definitive catalog of Scholl specimens held or sold by MMGS. To the best of our abilities we have corrected spellings, clarified obsolete or varietal mineral names, and completed locality names (e.g., by adding "Maine") where it could be done with confidence. Errors and inconsistencies remain that we were unable to resolve or perhaps just overlooked.

MMGS label showing Jo Scholl's catalog number

Jo's masking-tape label on the same specimen

<b>Left Margin Note</b>	<b>No.</b>	<b>Species</b>	<b>Location</b>	<b>Source &amp; Other</b>
* Items marked in the manuscript with a red dot in the left margin are believed to have been removed from the collection by Jo Scholl.
